

Our dynamometer team specializes in remanufacturing Midwest and Dynamatic dynamometers, with the capability of restoring model years as far back as the 1930's to today's improved OEM specifications.

Remanufacturing Done Right, With a Factory Warranty

Dyne Systems is the sole owner of original OEM drawings and specifications for Midwest™ and Dynamatic™ dynamometers. If your company is ISO Certified, you are probably aware that certification can be adversely affected if your dyno is rebuilt by a non-OEM shop. Don't risk your certification - work with Dyne Systems and get the quality you expect.

Dyne Systems' Remanufactured Dynamometer Warranty covers one year, and includes parts and labor. We have this level of confidence in our remanufactured dynamometers because all parts are either restored to original specifications or completely replaced. No other shop can offer this level of service.

- Remanufacturing to OEM specifications
- Spare parts inventory on hand
- Optional 2 year warranty

Remanufactured Used Dynamometers Available

Purchasing a pre-owned dynamometer can save you significant money. DyneSystems maintains an extensive inventory of used dynamometers, ready to be rebuilt. This inventory includes eddy current as well as AC and DC units. All DyneSystems' rebuilt dynamometers come with a One Year Factory Warranty on parts and labor.
